**Sudoku Part 3**

Basic GUI

HI kids,

You are to write a GUI for your Sudoku. Basic. Just allowing the user to enter numbers. There are many different options available to you.

You may use:

- Text Input Fields
    - https://p5js.org/examples/dom-input-and-button.html
    - https://editor.p5js.org/tom.smith/sketches/fASj3inoc
- Drop Down Lists
    - https://p5js.org/reference/#/p5/createSelect
- Any Input Device you may find or wish to code

See mine below:

I chose this option as it allowed me to control future selections. Note that 3 become deselected where appropriate. You don't have to choose this option, however, if you are interested see me for some minor source code.

Note I stored my select lists in an 81 element array of a class I created.

To reiterate, try stuff. I'll TRY to support you visions (no guarantees). I can definitely share some source code if you go this route.
